

Decarbonisation Surveying

B-engineering
Group

What is a Decarbonisation Survey?

A decarbonisation survey is a comprehensive technical assessment of a **building's energy use, carbon footprint, and upgrade potential**. It goes beyond a standard EPC assessment by providing a detailed roadmap for achieving compliance with **Minimum Energy Efficiency Standards (MEES)** and reaching EPC B.

The Benefits of Early Action

Conducting a decarbonisation survey now allows landlords to:

-  **Spread upgrade costs** over multiple years
-  **Avoid last-minute contractor shortages**
-  **Secure funding** before it becomes limited
-  **Enhance asset value** and tenant appeal

It also demonstrates a proactive commitment to sustainability, which is increasingly important to investors, occupiers, and regulators.

Analysis of
building fabric
and insulation

Review of mechanical
and electrical (M&E)
systems

Identification of
energy-saving
opportunities

Feasibility of
renewable energy
integration

Lifecycle cost and
carbon savings
modelling

THIS DATA-DRIVEN APPROACH ENSURES THAT BUSINESS LANDLORDS CAN MAKE INFORMED INVESTMENT DECISIONS THAT ALIGN WITH BOTH COMPLIANCE REQUIREMENTS AND LONG-TERM SUSTAINABILITY GOALS.

BOOK YOUR DECARBONISATION SURVEY NOW AND SHAPE YOUR BUILDING'S ENERGY FUTURE
